

INFORMATION TECHNOLOGY GROUP
FY01 RATES
[Ver. 2.27.01]

The Department of Administration, Information Technology Group (ITG) provides assistance to state agencies requiring computer and telecommunication related services. All agencies must budget for and clearly identify the expected cost of ITG provided services on their Line Item Detail and Interagency Services budget forms. This information is required by AS 44.21.045(e).

This document includes hourly rates for the division's consulting services and rates for equipment and services offered by the Computer Services and the Telecommunication Services sections of ITG. In addition, the overview contains general information about rates, billing, and prorated charges for different services.

Revision

A rate revision was endorsed by the AST on October 16, 2000 and approved by OMB on October 30, 2000. The revised rates will be effective July 1, 2000. With the exception of basic telephone services (BTS), ITG staff will be issuing adjustments, in November, for services billed prior to November 1, 2000. BTS will be billed at the revised rate beginning with the October billing. Adjustments for BTS will be made after September's billing is released.

Overview

Rates are based on projected ITG costs and expected resource use. The rates are designed to generate sufficient revenue for ITG to meet actual costs of operating, maintaining, and supporting the computer and telecommunication facilities.

The majority of services are billed on a monthly or annual basis. Some services are billed upon request for the service, and some are billed upon completion of the service.

Rates for computer services are structured to encourage non prime-time processing. Prime-time rates apply to processing from 8 a.m. – 5 p.m.

Basic telecommunication services billed on an annual basis include dedicated voice/data lines, statewide paging, 2-way radio, and telephone services and features (telephone services and features may optionally be billed on a monthly basis).

Partial year service for dedicated lines, paging, and 2-way radio is prorated to the nearest full month of service. If installed on or before the 15th, a full month of service is billed. If the disconnect order is received on or before the 15th, there is no charge for the month.

Annual recurring charges for telephone services and features are prorated by month; customers are charged for the first month of service and are not charged for the last month of service, regardless of which day of the month service is connected or disconnected.

ITG offers consulting and/or technical assistance for a variety of computing and communication services such as: Special Overtime Operator (4 hour minimum), bursting, de-collating and special handling, communication design and consulting, application programming consulting, systems programming consulting, and facilities management. These services are priced at the level needed to recover expenses and are dependent upon the level of personnel expertise needed to perform the tasks.

The Network Services rate methodology was approved by the Telecommunications Information Council (TIC) on August 19, 1997. The rate is per device connected to the Network. Device count information is solicited from the departments using the Network.
